Description

This bug happens when you have WYSIWYG editing enabled, and a wiki page template that looks like this:

```
[tiki-index.php?page=HomePage#SomeSection]
```

i.e., it contains a link to a page section.

If you setup a quickedit module to create a page with that template, then when you save the page, the #SomeSection part of the link gets deleted. So the link points to HomePage instead of HomePage#SomeSection.

Hi Alain,

I think I understand the bug but not 100% certain. I saw that you created a show instance but didn't see any configuration on it.

Could you reproduce the issue on show?

thanks
