Description

if I fill out a content with the following text:

```
--DateTime and DateTimeZone-- - for further knowledge go to [http://derickrethans.nl/talks.php  
-] [http://www.worldtimezone.com/index24.php ---- ((Overview)) | ((Development)) | ((PHP))
```

I can save this page, but it will show "Invalid URI supplied" after saving it. Also the following errors appear on the page:

Search index could not be updated. The site is misconfigured. Contact an administrator.

Invalid URI supplied

Search index could not be updated. The site is misconfigured. Contact an administrator.

Invalid URI supplied

EXPECTED:

I would expect to either not saving the content and showing errors immediately or to save it and show at least something (auto-corrected?). At least I would expect, that the search index is going to be build and not crash, which it does right now.

I just tested in 18.x Must have been fixed since 12.x

Not nice output because wiki syntax has errors, but no crash.

User can adjust, as with any invalid syntax.
