Description

EDIT: The main problem was that doc/devtools/update.dogfoodserver.sh was interactive. It was fixed in commit r51249 by providing the default modelname to setup.sh. Also, the -n option to setup.sh has been deprecated in r51251, since it wasn't used anyways.

sh setup.sh -n should make the script non-interactive. It is still interactive and prompts for user input, though.

To reproduce:

sh setup.sh -n

The value of the OPT_NOTINTERACTIVE variable is simply ignored, and the user is asked for input no matter what. (using the read command) It should test for if -n %22\$OPT_NOTINTERACTIVE%22 more often.

Frank Guthausen 12 May 14 18:26 GMT-0000

In most cases

sh setup.sh mixed

will do the job.
