Description

On the bottom of each Wiki page, in the Print view, a <HR> appears.

```
117 <p>For over 200 years – Goethe's F
118 </p>
119
120 <h3 class="showhide_heading" id="Z
121 <p>This original German copy boast
122 </p>
123 &lt;HR&gt;
124 <p>
125 </p>
126
127 </div>
128
129 <hr class="hrwikibottom" />
130
```

I would expect that it would either not escape the brackets, rendering it in the browser, or for it to be removed entirely.

Solution

Fixed sometime between 13-16. I just checked a tiki 16 install and its working fine now.
