Description

'Add an item' for tracker field 'item link' does nothing when field displayed as multi select.

See it reproduced here:

http://xavi-9794-5317.show.tikiwiki.org/tiki-ajax_services.php?controller=tracker&action=insert_item&trackerId=1&modal=1

p: 12345

The screenshot shows a 'Create Item' dialog box over a TikiWiki interface. The dialog has tabs for 'Note' (selected), 'Read this first', 'Feedback', and 'No Tabs'. The 'Note' tab contains a note about considering site changes and a 'Read more' link. Below it are fields for 'login' (set to 'admin'), 'Name' (set to 'Mr Administrator'), and a 'Votes' section containing 'Mr Bean1user1' and an 'Add item...' button. There is also a 'SkypeID' field.

Hi Xavi,

I fixed this bug, just an issue in the incorrect id caused the bug. With this fix ,we also need to provide a Wikipage name in the Options for AddItem which contains the template to add an Item to make it work perfectly while using the option. Revision ID : 55560

Thanks.
