### Description

When I register a new account I get a correct warning at the bottom:

If you use an email filter, be sure to add Tiki12 DEV2 Responding Together

<responding.together@wikispiral.org> to your accepted list

This is correct and is like Tiki 9.

The email is received correctly, but it claims to come from "Tiki12"

The originator field (the "From: " field when doing "show email source" is:

From: Tiki12 at wikispiral.org, DEV2 at wikispiral.org, Admin at wikispiral.org, SPIRAL at wikispiral.org, admin at wikispiral.org

This is gibberish, none of these emails exist

In Tiki9, it was correctly claiming to be coming from "Tiki12 DEV2 Responding Together" and the From: field was correctly:

From: Tiki12 DEV2 Responding Together <responding.together@wikispiral.org>

### Workaround

Try: "Tiki12 DEV2 Responding Together" <responding.together@wikispiral.org>

In fact, this is a global issue for outgoing emails.  
No need to setup registration for reproducing.

Just go to tiki-admin.php?page=general

In field " Sender email:" put:  
whatever the mail software should display <email@example.com>

Then use "Email to send a test mail"

Jean-Marc Libs 04 Oct 14 00:49 GMT-0000

Getting no answer here, and finding nothing encouraging in the Zend code, I looked for people who are familiar with Zend on stackoverflow.

This was asked Jul 25 at 22:03 on stackoverflow

<http://stackoverflow.com/questions/24965179/how-can-i-extract-name-and-email-before-using-zend-setfrom-method>

Still no answer.

I guess we just need to write our own email parsing functions 😞
