Description
    Hello

    In Tiki12 when I change the language from English to Farsi this make the site to use the translation
    and then when I select the Multilingual check box the direction of the site change from LTR to RTL
    and almost everything is in correct position.

    In Tiki12.2 the first step is good but when i select the Multilingual check box the left side module
    comes to right side
    but it does not make the center part of the
    page to stay at center and they overlap with eachother.

    Correct RTL layout:

    Buggy RTL layout:

    I trace the problem and found that when the Multilingual check box is selected the BiDi.css is used
    and the difference in Tiki12 and Tiki12.2 BiDi.css that makes the buggy layout is the lack of these
    lines in Tiki12.2:

    1. col1.marginleft {

    margin-left: 0px !important;

margin-right: 200px !important;}

1. c1c2 #wrapper #col1.marginright {

margin-left: 200px;
margin-right: 0;}

Importance
10 high

Easy to solve?
10 easy
