Description

Sometimes, a same site has several domain names. And they all end up with different Canonical URLs.

"Examples of non-malicious duplicate content could include:

Discussion forums that can generate both regular and stripped-down pages targeted at mobile devices

Store items shown or linked via multiple distinct URLs

Printer-only versions of web pages"

Source:

<https://support.google.com/webmasters/answer/66359?hl=en>

Also, is http or https the canonical?

Related pref: add/remove www

Solution

Fixed in

Revision: 52757

<http://sourceforge.net/p/tikiwiki/code/52757>

Author: jyhem

Date: 2014-10-08 00:52:32 +0000 (Wed, 08 Oct 2014)

Log Message:

FIXbp/r52755 Give enough control on canonical urls to actually permit preventing duplicate listings in search engines as advertised

Revision Links:

<http://sourceforge.net/p/tikiwiki/code/52755>

and some more in

There is now a new "Canonical URL domain" preference, where admins can choose their domain globally or per perspective.

It's up to the admins to decide if http or https is the canonical. Same with <http://example.com> vs <http://www.example.com>
