Description

I wish to use a smarty template to format the page created through the pluginTracker output-to-wiki feature. I've just noticed that it only accepts wiki pages as templates. I don't know if this a permanent limitation or not. My wish is for Tiki to provide the option to use smarty templates as well as wiki templates. pluginTrackerList does this for pretty trackers.

I want to use a smarty template because I want to avoid creating content for optional fields that were left blank in the tracker item. I can do this with {if} statements and isset().

Workaround

When I wrote this, I was having trouble getting {if} statements to work in wiki templates. But I have figured that out. So that is the workaround.

I think this is still a legitimate wish, as it will make pluginTracker consistent with pluginTrackerList, pluginTrackerFilter, and any similar plugin.
