Multiple new comments, including
1. Cache issue
2. Removed the regression category
3. It was not escaped in Tiki6 either
4. This is no regression
5. ~np~ and {CODE()} not escaping {{argument_variable}}
6. Yes Torsten
7. see this doc page for argument variables:
8. Hi Luci
9. Confirmed
10. Hi Torsten

Column related to new content is not shown, and there is no clear indication that some more content is hidden in the right-hand side of that table.

New: A library has been found to solve this problem: https://www.jqueryscript.net/other/Double-Scrollbar-For-Scrollable-Container-jQuery-DoubleScroll.html . License is MIT.

Here's a link to a possible solution:
http://stackoverflow.com/questions/3934271/horizontal-scrollbar-on-top-and-bottom-of-table .

Xavier de Pedro 21 Sep 14 14:33 GMT-0000

Ok, but I get lost in the css code/definitions... so +1 to get some httml+css expert (= not me) to implement it, either by hand in our less files (again, foreign language to me) or with any of the jq plugins:

- https://github.com/sniku/jQuery-doubleScroll
- https://github.com/avianey/jqDoubleScroll
- ...

And thanks for your feedback, Gary, by the way! 😀

luciash d' being 🐙 24 Sep 14 09:30 GMT-0000

It does not require jQuery-UI and the original author of the previous one did work on it too. +have a compatible license (MIT)

luciash d' being 🐙 23 Sep 14 09:02 GMT-0000

Would adding some inner shadow on the right edge help to emphasize the fact there is content hiding and continuing behind the edge?

luci

Xavier de Pedro 23 Sep 14 18:26 GMT-0000

yes, both things would be useful. The shadow (as in http://jsfiddle.net/joshnh/QYBtT/ ), and the horizontal bar at the top to ease the task to scroll to the right with no-handheld-or-touchscreen devices such as traditional computers with a mouse.

luciash d' being 🐙 24 Sep 14 09:21 GMT-0000

Not sure I did it in correct file (tabs-and-tables...less).

See 52624
Probably will need some way (jQuery) to compute and indicate if the table inside is overflowing the .table-responsive container or not to apply a special class (to make more sense).
Probably will need a reverse variant for RTL too.
Something like

```
[dir=rtl] .table-responsive { box-shadow: 5rem 0 9rem -9rem rgba(0, 0, 0, 0.75) inset; }
```

Please feel free to improve.

Xavier de Pedro 21 Jul 19 16:47 GMT-0000
fixed in 20.x, at least, afaik.
