Description

I created a new pref called `feature_canonical_domain` (see commit: <http://sourceforge.net/p/tikiwiki/code/52757>) just like explained here:

<https://dev.tiki.org/Creating+New+Preferences>

But it does not show on preferences search.

Neither on my dev site, nor in the community tiki.org

Yet it can be seen and configured in admin → sefulr

To reproduce: log in tiki.org → admin → search "canonical"

The old `feature_canonical_url` appears (correct)

The new `feature_canonical_domain` does not (why?)

This is not fixed with clear/caches

This is not fixed by reindexing since <http://tiki.org/tiki-admin.php?page=search> shows that "Your index was last fully rebuilt on Monday 13 October 2014 04:00:01 CEST." which is much after

So, there must be some missing step in <https://dev.tiki.org/Creating+New+Preferences>

I just created this show instance (show rocks!) because I suspected as much:
<http://jyhem-9952-5484.show.tikiwiki.org/>
and there the preference shows up nicely.
