Description

The search function cannot find words within the fancytables. This is quite important function so I would like to know a solution. Is it maybe possible to use the alternative query when the search returns empty set? and check if the query can be found with this alternative. And site is using mysql search currently. Does this work on other search engines?

By using SQL i can find it by changing the search query from

Not found

□□□□□□□□

select \* from tiki\_pages where data='myQuery'; or Select \* from tiki\_pages where data='%myQuery%';

Found

□□□□□□□□

Select \* from tiki\_pages where data like '%myQuery%';

But if you leave out the wildcards it still returns nothing
