Description

I find Google Alerts very useful - and they generate code in the format

<https://www.google.com/alerts/feeds/14597648580287617735/9526379150674439193>

This URL doesn't seem to work in tiki-admin_rssmodules.php since the URL is not an XML file. I am however able to integrate a number of Google Alerts into an RSS Feed Reader like Feedly and output an OPML file - but this cant be read by rrsmodules.php either.

I gather that this module uses Zend Feed Reader and it doest have the functionality - so its probably an issue for them. Wanted to flag it as a really nice to have however - there must be lots of tiki sites out there like mine (eurafwiki.eu) which are trying to expose all available information and news on a small subject, and google alerts can really help in this. .

Thanks, Gerry Lawson
