Description
When editing a comment assigned to a trackeritem, the comment doe not update after save.
This happens only when codemirror is used.
When toogle "Highlighter" two times before hitting save, then the updated comment will be saved.
The reason seems to be that upon save, the updated comment is not read from the codemirror data
structure, but from the initially loaded content saved in the textarea.

I was able to debug to the point where the POST request happens. That is tiki-jquery.js arround line
1740. There the wrong value is taken. Mabye also autosave.js is involved as well.
