Description

Forum editor (wysiwyg?) can't be loaded in mobile device (tested with chrome on android smartphone).

Example url:

https://next.tiki.org/tiki-view_forum_thread.php?comments_parentId=52179

If it can't be properly fixed, at least wysiwyg editir should be disabled when in mobile devices?

Update as of March 16th 2015

Bug still present in next.t.o (sorry, I can't see the revision number any more at "Settings > Control Panels > General > General Preferences").

I did clear the ./temp/public/ cache folder, reloaded the url indicated in the bug report in a browser at the computer (wysiwyg shown), and then something equivalent on Chrome on Android smartphone, and still can't see the textarea to type.

So please, don't close a bug report unless you tested the fix with the described steps to reproduce it, even if some other bugs are fixed that "should" or "might" also fix the reported bug, etc. At the most, change status to "pending" while requesting to the bug poster to "Please retest". And thanks wolfgang for all you efforts to improve Tiki: they are very welcome!

In addition, no editor shown at the show.t.o instance attached to this bug report with Chrome on GNU/Linux PC, using 14x r54428, either:

Solution

wolfganga: Fixed in r54393 /14.x and r54394 trunk. You need to clear the minified cache in /temp/public.

I checked with an oldish iPhone 4s / iOS6 and can edit in forums.

Jonny Bradley 10 Mar 15 16:15 GMT-0000

There are a couple of things here - one is that the previous (jquery) mobile mode should not be enabled in a tiki 13 or 14 production site (should be better in 14, but not guaranteed).

Secondly, ckeditor is broken in next.t.o (probably all sites) because of a minify regression (i suspect due to r54227) "TypeError: undefined is not an object (evaluating 'window.CKEDITOR.config'))" 😞

Either way, not a "blocker" imho, configuration issue

Jonny Bradley 10 Mar 15 16:15 GMT-0000
Minify being broken is a blocker, i reckon ;)

Torsten Fabricius 10 Mar 15 18:32 GMT-0000
wasn't minify just recently fixed by Wolfgang A?

Jonny Bradley 11 Mar 15 20:12 GMT-0000
Sadly i think that fix broke it quite a lot 😞

WolfgangA 13 Mar 15 16:33 GMT-0000
I should not have broken anything given that ckeditor is properly added to the js list. I'll look into this.

Jonny Bradley 11 Mar 15 20:14 GMT-0000
Or at least it should be... guess i should add a warning to that pref?

WolfgangA 14 Mar 15 18:26 GMT-0000
Fixed in r54393 /14.x and r54394 trunk. You need to clear the minified cache in /temp/public.
