Solution

Sorry, can't find the commit but it observed the feature_search pref and uses a plain input field if unified search wasn't available (ah, r53642)

Update: needed more fixing, hope r54764 does the trick properly this time

---

Confirmed it's fixed, thanks Jonny!

Workaround

This has been fixed a while ago, and i updated the instance and created a new tracker it that works fine.
The problem was that the "List detail pop-up" on the tracker properties got set to "n" and i reckon if that's removed it all should be fine
