Hi,

The latest version of FullCalendar is v2.3.1, but why we are using v1.6.1.6 instead of latest one. Is there any specific reason?

Thanks in advance.

Xavier de Pedro 30 Mar 15 16:40 GMT-0000

Hi mani:

We are not using fullcalendar, but fullcalendar-resourceviews: https://www.openhub.net/p/fullcalendar-resourceviews

Which was forked from fullcalendar some years ago, and it allows using the basic features in fullcalendar, plus the resource views for http://doc.tiki.org/PluginTrackerCalendar

gezza 30 Mar 15 19:45 GMT-0000

I was just exploring this for Tiki15, so I put here my findings:
- https://github.com/jarnokurlin/fullcalendar seems to have stopped evolving, its homepage (http://tux.fi/~jarnok/fullcalendar-resourceviews) also not available
- https://github.com/arshaw/fullcalendar (from which fullcalendar-resourceviews was forked) seems to be alive and the author started to work on resource view (http://fullcalendar.io/timeline/), but plans to release it as kindof commercial product (http://blog.arshaw.com/1/post/2015/02/timeline-and-other-news.html), although have not yet decided fully about the licensing strategy.. ("So, I will be making Timeline a paid premium feature when used in commercial projects. The exact terms are still undefined, but there will likely be a per-project license with email support (i.e. me personally answering your questions to start) for commercial projects and a parallel GPL-esque license for no-cost use in fully open-source projects. I also plan to offer a significant price reduction for non-profit organizations.")
Maybe Tiki could approach him about terms on a special license for Tiki..

luciash d' being ☐ 17 Apr 15 19:16 GMT-0000

Thanks gezza. Found about the same.
We have talked with Xavi today and since it works flawlessly in Tiki 12 I will try to fix it for 14. We agreed there is no need to update the lib in Tiki if it works (do not touch) and no security updates are necessary. In case security issue or requests for enhancements will be necessary, we can make our own fork based on Jarno Kurlin's work on GitHub. Asking Adam Shaw for special license is no go IMHO.
