### Rating

★★★★★ (0) ?

### Description

This is a regression compared to the behavior of the profile in 12.x

See screenshot included in:

[http://profiles.tiki.org/Random\\_Header\\_Images\\_14](http://profiles.tiki.org/Random_Header_Images_14)

which corresponds to the equivalent profile in 12.x

You can see it reproduced here:

### Workaround

Thanks all for your tips and feedback.

I switch the wish to closed since I managed to get a cheap fix by means of removing the width param in the custom module, and add custom height for the img.box in the top modules section through custom css.

At least it shows a decent display for the image and surrounding box again.

Now with responsive design a priority, this profile's specifying the dimensions of the image-containing div and image itself seem wrong. This is also one cause of the image not fitting in the box. With the Bootstrap img-responsive class, the image should conform to the parent div's size (or if not that class, with some other %-based rules we can add). I think the fix will be something along these lines.

Xavier de Pedro 09 Apr 15 15:40 GMT-0000

FYI, I don't know how to fix it myself.

Gary Cunningham-Lee 10 Apr 15 03:02 GMT-0000

That's ok. I'll have a shot at it as time permits.
