Description

Share a wiki page should share the body of the page only, and not all the other module zones

Solution

It seems fixed the core problem in 21.0 at least: only modules viewable to anons are shown, in my test from a production site.

However, I didn't have workspaces set there. Feel free anyone to open a new bug report if a similar issue to the one I reported exists under some specific conditions (like workspaces, in 21.x, or other setups)

Agreed, but it's sort of a new feature so after 15.0 i think?

Roman Zakharenkov 08 Jul 16 22:57 GMT-0000

If workspaces are used - non-public data is being shown in 'Perspectives' module, providing a viewer with an information of web-sites structure,
