### Description

When trackeritems have permissions (i.e using a category field) and permissions are set so that only certain usergroups can see certain items (based on their category), then pagination does not work properly.

#### Example:

Tracker has 50 items. Only item 2 and item 28 is accessible to user "Peter" due to permissions.. If "Peter" open the trackerlist, he will see only one item on the first page, and need to go to the second page to see the other one.

Expected behaviour would be:

"Peter" sees just one page with two items.

This effects also tablesorter when being used.

Fixed in 14.x r55304 and trunk
