Description

Tableserter doesn't seem to load when the tiki 12 lts is shown in mobile mode.

Similar approach works on 14.x, but it wpuld be lovely to have our LTS branch work in mobile also

Reproduced here:

Switch to mobile and see how the tableserter ui is lost

There are some tips elsewhere about how to fix this type of issue (I wonder if it's the same or not):

<https://forum.jquery.com/topic/tablesorter-with-jquery-mobile#14737000003054153>

Solution

I think the issue is due to the version of tablesorter being used at the time along with the css being used. Both were changed significantly after version 12. I believe it's too big a change to make to an LTS to try to push the ability to use mobile back.
