Description

upon tiki install one is asked to set some folders to 777
temp/public is missed from this list, which made my antibot images fail to appear
namely, antibot features are written into temp/public

Do you mean setup.sh missed the directory out? Or it wasn't listed as being a dir that the web server needs write access to? (or both?)

Gergely 25 Sep 15 20:03 GMT-0000

Hi Jonny, I have not checked the setup.sh, but I am sure it was not in the list of the web server writables.
