Description
Plugin AppFrame works as expected up to Tiki 12.x, as far as I know (I didn't test with Tiki13, sorry), but fails with Tiki 14.x: the plugin doesn't get the central column expanded to use full width anymore, even if you request so with the plugin params.

Just side columns are hidden, but central column stays still with the same width.

Code to reproduce:

📑

__Documentation about this Web Database system__: * https://doc.tiki.org/Trackers * https://doc.tiki.org/PluginTrackerList {appframe min="1" hideleft="y" hideright="y" fullpage="n" absolute="n"}
