Description

I just came along a problem.

We use the tiki structures, combined with the menu module to display our navigations.

The structure-menu-combinations doesn't link to tiki-index.html?page=page_slug, but to the page slug itself.

That may be because of the sefurls. It's what we want, but it can lead to problems.

If you rename a page to, for example, test.html (or something else with a dot), the page is not available through the menu any more.

If you press the menu entry, you will just come to the page, where:

No route found. Please see <http://dev.tiki.org/url+Rewriting+Revamp>

is written.

So my question is, should dots be allowed in the pageSlug?

Hi

There are two things here, one is the "page name" the other is the "page slug" and i just made a page called "Page with a dot.in it" (page name) and that gets rewritten to "Page-with-a-dot-in-it" as the page slug (i'm using hyphens mode).

That seems to work ok... and it also works ok in a menu (but i don't have time to set up a test of a structure menu test). Can you set up a show instance to show what you mean please?

Thanks!

GriessbreiLP 15 Oct 15 09:52 GMT-0000

I honestly want to reproduce it, but right now i have a problem with the tiki instance. There is no hover effect on the login (and many other elements), so i have to go to `/tiki-login.php` to get to the login page.

When i create a new page, i always get

__Not Found

The requested URL `/HomePage` was not found on this server.__

And the standard "homepage" is not available either. I don't know what I did wrong, I configured some things (like i always do on my tiki setups) . The hover problem was there before I configured anything.

GriessbreiLP 16 Oct 15 12:24 GMT-0000

I just deleted the old tiki snapshot to reproduce the actual problem. I am not able to reproduce it, because of another problems, that occurs when i change the settings.

As soon as enable "sefurls", i am not longer able to visit pages like /HomePage.

Another problem that occurs with chrome is, that i don't get the pop up of the login box. This problem is not reproduceable with vivaldi.

Jonny Bradley 06 Oct 16 12:39 GMT-0000

Sorry, SEFURL is not possible on show.tiki.org currently 😞
