### Description

- make sure all is OK since TRIM was built before Composer was added to Tiki. Perhaps Jonny fixed some of these?
- Some commands made via TRIM should perhaps use the newer Console commands? (which is a risk to break older installs. Perhaps use the command depending on the Tiki version?)
- If all this is too complicated, we may have to limit support to 12.x, but that would be a shame since 9.x LTS is still supported

12.x installs fine, but for 11.x Your Tiki is not completely installed because Composer has not been run to fetch package dependencies. You need to run 'sh setup.sh' from the command line. See <http://dev.tiki.org/Composer> for details.
