Description
Clicking on the interrogation mark that exist on the right of the title "Assign global permissions" on objectpermissions.php takes the user to a wrong doc page: https://doc.tiki.org/Permission (The word Permission in the singular form)

Facts:

- The page https://doc.tiki.org/Permissions (in the plural form) exists.
- An alias "permission" at the bottom of the page above also exists, but seems not to work properly.

Trying to workaround myself:

- I created an alias called "Permission" at https://doc.tiki.org/Permissions to test if the the upper case sensitivity of the letter "P" could eventually be what was preventing at the alias to work properly. It did not work. Another possible bug.

Solution
Corrected help page name in commit http://sourceforge.net/p/tikiwiki/code/56640
