Description

Hi,

After pulling in the newest code from the trunk (as of r56661), I am experiencing a permissions error that is being caused by the LDAP not syncing with my groups properly.

When I attempt to log in to my site, it allows me to log in, however when I get to the home page it simply gives me an error message that reads "You do not have permission to view this page." The only way I am able to see anything on the site is through the default admin account (but this is because it does not need to be authenticated externally).

I have been unable to find a solution to this, but this was working for me just before the weekend. Also, I am unable to do a tiki demonstration due to the nature of the LDAP, so please contact me if there are any questions about my set up.

Any help would be greatly appreciated. Thanks.

Solution

The credentials for <http://taylordustin-11691-5758.show.tikiwiki.org> are: admin / 12345

The server is configured to use LDAP as authentication, you can use any of the user mentioned on <http://www.forumsys.com/tutorials/integration-how-to/ldap/online-ldap-test-server/> to test.

Example user for testing: gauss / password

Closing as unable to reproduce and requests for more information unanswered. Please resubmit with more information or show instance if problem persists.

Changed version to 15.x since it sounds like this happened in trunk. Feel free to change back if incorrect.

rjsmelo 20 Feb 16 18:41 GMT-0000

taylor dustin, I tried to reproduce the problem, using the LDAP server details of the following public ldap server:

<http://www.forumsys.com/tutorials/integration-how-to/ldap/online-ldap-test-server/>

I can't reproduce, I can successfully login using tiki 15.x while using Tiki + LDAP as authentication method.

I've created a tiki instance (<http://taylor dustin-11691-5758.show.tikiwiki.org/>) and configured the ldap server, maybe you can change the configs to reproduce the problem, The admin user is "admin" password: "12345"

rjsmelo 20 Mar 16 15:32 GMT-0000

Hi taylor dustin, I would appreciate if you can provide some feedback on this issue, I've setup a demo instance with a ldap backend but I couldn't reproduce the issue.

Have a look in the solution section of the issue as well as previous comments for instructions to use the demo instance.
