Description

On "tiki.org/Versions" the link entitled: "Why PHP 5.5 and not 5.4" broken.

I have searched through the site and did not find it, so could not update it myself.

Update:

- some links fail the first time that you click on them, but work the second (same browser, computer and all). Odd!. Reproduced with :
 - <https://tiki.org/tiki-pagehistory.php?page=Versions&oldver=6>
 - https://tiki.org/tiki-view_forum_thread.php?comments_parentId=52703#threadId53177

Update: cannot reproduce anymore - got fixed?

Solution

It seems that current server setup require links to be made with https instead of http, and that link pointed to a forum post with just http.

See:

<https://tiki.org/tiki-pagehistory.php?page=Versions&oldver=6>

However, some of those links only work at the second time that you click on them. The first time, the

url misses some params that were in the source url at clicking time.

Thanks for reporting. Please, feel free to fix any other issue like this that you find in *.t.o sites.

I don't think this issue has been resolved. I get an error while clicking on link in question, and the link you posted in resolution also throws a different error. I took screen shots of both errors, but could not find a easy way of posting them. (It might be because I'm on an iPad)

luciash d' being 07 Oct 16 11:56 GMT-0000

Something odd is setup with tiki.org

The issue with first click fail and second click works is still present.

For example if I want edit the wiki page <https://tiki.org/Versions>, first time clicking the Edit button fails with "No page indicated" and the ?page=Versions is indeed removed from the URL but second time when I go back and try again it works fine...

Something to ask Oliver (the server admin) maybe?

Just as a follow-up it seems not to be the first click, but rather an alternation between one click and the next. Using above links I get an alternating message when clicking on the same link. When clicking: <https://tiki.org/tiki-pagehistory.php?page=Versions&oldver=6>, One click will bring me to <https://tiki.org/tiki-pagehistory.php> (note the missing prams at the end of the url) and the next click will bring me to <https://tiki.org/Community>.

Now here is the odd thing. When using <http://redirectdetective.com/> to trace the redirects. I always get a 301 redirect to <https://tiki.org/tiki-pagehistory.php>. Never is it redirected to any other place. That means something must be going on with the browser that is different from this service. I can also get it to display this same behavior if I open up a new private browsing session each time I click on the link.

So the issue of why its sending us to the tiki community page must be session and/or cookie data. Im guessing that means this is a issue in tiki, rather than a x.tiki.org server issue.

drsassafras 29 Jan 17 05:13 GMT-0000

Confirmed. When I remove the PHPSESSID cookie from tiki.org, i always get <https://tiki.org/tiki-pagehistory.php>, so its a tiki issue. There is a session variable that is triggering this redirect.

drsassafras 03 Apr 18 07:48 GMT-0000

I can also no longer reproduce this issue. It must have been fixed.
