New calendar items can't have times starting in the AM, and ending in the PM

**Description**

Basically what happens is when you try to create a new calendar item, if the times of the event start in the AM and end in the PM, it causes some sort of issue with the way the timecodes are calculated. Sometimes it automatically changes the date to some distant future date like in the year 2507 or something.

I will attempt to replicate in a tiki show instance.
Please demonstrate your bug on show2.tikiwiki.org

Hi, I attempted to do a show instance for this bug, as I believe I will be able to replicate it. However, whenever I create the show instance and click the link, it brings me to the install page and says that I need to run 'sh setup.sh' from the command line. There is no command line for me to run this from! What should I do here?

**Jean-Marc Libs** 14 Jan 16 11:46 GMT-0000

Hi, sorry about that. The current Tiki seems to have some dependency on a third-party package which requires a too recent PHP version, as you can see in:

http://taylordustin-11691-5790.show.tikiwiki.org/install_log.txt

We are looking at a proper fix.

Meanwhile, I have manually fixed your show instance, you may now configure it.

Thanks for your report!

**taylordustin** 20 Jan 16 16:09 GMT-0000

Great! Thank you for fixing that for me. I have gone and demonstrate the bug in the show instance.

Basically, I created a new calendar and attempted to alter the start and end times for a new event on the calendar. It just causes the date to be altered wildly sometimes and you can’t alter the times correctly.
Hi Jean-Marc,

Is there perhaps anything else I could do to help solve this bug? I haven't been able to find any solutions as of yet, but I am still looking into it. Is this bug replicable on your end?

Really the only time it shows is when you click on the calendar to make a new event. After the new event window opens, when you attempt to alter the start and end times for the event, times that start in the AM and end in the PM cause some sort of calculation error in the timecodes. Let me know if I can do anything to help.
