Description
For example, on the wiki edit page, in the help dialog, when you select a plugin such as "IMG", the modal for entering the parameters (a jQuery UI dialog box) has the close button, but there's no "X" icon or character.

Solution
Hopefully r57668 does the trick, however , this replaces the bootstrap button function with the jquery-ui one, so there might be a nasty side effect to this somewhere. I have tested most places $.fn.button is used, e.g. the tracker icon fields, and all seems ok - but watch out for button weirdnesses ;)
