Description

The Tiki 15.0 Alpha Installer complains about invalid characters in database name T15T. Generally all database names with a capital letter in it are rejected. This is not obvious from the error message since a capital T is an alphanumeric character in my opinion.

I do not know whether capital letters in database names are considered bad from Tiki's point of view or not. Thus either the error message should specifically list the allowed character to be

a-z0-9_

Or the check needs to be relaxed.
