Description

Surprisingly, there seems to be no way of searching for file galleries.

When I search for a word, Tiki gets me the file gallery documents which name contain this word (with additional link to the file gal) and file gallery documents which description contain this word, but not file gallery which name contains this word.

Similar behaviour in Tiki15 with unified search+mysql or with legacy mysql full-text search.

Similar behaviour in Tiki9 with legacy mysql full-text search.

Why I discovered this?

I have this file-gallery based website with all my photo albums and I can tell you with 124 file galleries, it would be a useful feature.

Especially as I find no way of having all file galleries displayed in the same page because some are hidden in sub-galleries, so the fgall explorer is useless for this purpose (it's great for normal usage).

Otherwise I would just do Ctrl-F in the browser.
