Description

This seems to be a regression since Tiki12 LTS at least. (non-bootstrap, I mean)

since last visit module using bootstrap tabs: add different bg color to active vs non active tabs
You can see it reproduced here in dev.t.o in 14.x also, in the corresponding "Since your last visit..." module. All tabs have same whote background, and this makes it less usable to easily distinguish where tab you are at.

The "Since your last visit..." tabs are now using Bootstrap tab styles, so however tabs generally are styled in the theme is how they will appear in this module. It seems like some themes use pretty subtle coloring, maybe not a background color, but an outline around the active tab and different foreground (icon) color. Is that good enough?
