Comments

**gezza 15 Apr 16 17:18 GMT-0000**

css loading order is done by lib/setup/theme.php

I see a few options:
1) We could start adding manually feature specific css files here (eg: to step1 around line 47), but I fear it will be hard to maintain and get messy
2) If it is core Tiki feature, than these css rules could be in the base css file and the separate feature specific css should not be loaded at all. But this might also be hard to maintain for "outsourced" features
3) Addon css files are managed nicely, so we could approach these as "system" addons

Not sure which way to go, maybe there are other options, just putting my thougths here

**Marc Laporte 12 Mar 17 05:34 GMT-0000**

Feature should be removed or revamped. It needs to integrate with the rest.

1. Time tracking should be a tracker field type
Jonny Bradley 12 Mar 17 13:24 GMT-0000
+1 for removal (it was never really finished or usable imho) - want me to do it?

Gary Cunningham-Lee 13 Mar 17 03:45 GMT-0000
Also +1 for removal, from me, if time sheets can be done better with trackers.
