Description
Right now, group expiry just removes the user from the group.
In use cases of membership management in associations, or business, in which members pay a fee per year, this feature is needed for an easier setup without so much intervention of the admin in so many steps.

Scenario: NGO with 3 levels of users:

• A) "regular members", needing to pay fee FA
• 😄 "associated members", needing to pay fee FB
C) "students", needing to pay fee FC

2 levels of time-dependent fees for each group:

- first year you pay fee F*1
- from second year onwards you pay a different fee F*2

When the membership payment for a year is over, that user should be automatically re-assignable to another group defined in the group transitions, which should allow to set conditions for the trigger to happen:

- when group expiry happens
- when freeperiods from PluginMemberPayment expire
- when some tracker field = some value, higher/lower than some date or other tracker field, etc. (this one is just brainstorming; it should be thought more)

This way, they can be requested to pay for the fee F*2, knowing that they have to pay F*2, F*2 or F*2. With current codebase, after group expiry, you do not know which group that user belonged to, and you can't offer that user the right fee to be payed for with plugin MemberPayment.
