I want to use Tiki's banner system to manage hosted ads (such as Google Ads).

I created a new Tiki banner: `tiki-edit_banner.php`

In the Select ONE method for the banner: field, I selected Use HTML and added the following script (from Google Ads):
Upon saving, Tiki adds `<X>` to my code, breaking the SCRIPT elements:

```html
<script type="text/javascript">
  google_ad_client = "ca-pub-3913918000422534";
  /* Info Lettres 8 à 15 */
  google_ad_slot = "8790064474";
  google_ad_width = 728;
  google_ad_height = 90;
  // -->
</script>
<script type="text/javascript" src="http://pagead2.googlesyndication.com/pagead/show_ads.js"></script>
</script>
```

This happens even if I HTML Purifier disabled.

Tiki should allow full HTML (including SCRIPT elements) within the HTML box for Ads. I understand the security implication of allowing SCRIPT elements, but only users with permission to create ads can do this.

I tried creating a SHOW instance, but received the following error:

**Tiki Installer missing third party software files**

**Workaround**

My workaround is to have Google Ads in a module and apply them to the pages by using the MODULE plugin. However, I can no longer:

- Track clicks (from within Tiki)
- Show/display the ad by time/date

**Importance**

8

**Easy to solve?**
