Description

1. We enter the name of the user at the corresponding input, Tiki offers us a list of users (here is 1) which we might be looking for:

2. When we press "Share" button", the following error appears:

3. We delete the parenthesis and whatever is inside of them:

4. Press "Share" and the feature works well!

This is an issue, since Tiki offers users the "better way" offering users it knows about, but which doesn't work. Inter-tiki messenger on it's own is working properly, no error pops up at the very similar procedure carried out through the mailbox.

P.S. No php errors appear at the page bottom.
