Description

In wysiwyg edition, I can right-click on a table → Table properties → and set a value for cell padding, for instance 5.

This correctly sets cellpadding="5" at the table level.

But in the CSS file from the theme, for instance in line 182 of fivealive.css there is:

```
td, th {  
padding: 0;  
}
```

this seems to override the cellpadding="5" with padding="0" at the cell level, which takes precedence over the table level.

So it is not possible to set cell paddin to any value except 0.

This happens with all themes, it is not a fivealive issue.

I could not find from which less file this comes from 😞
