Description
    The Bing Machine Translation feature does not work in Tiki 15.2.

    I have registered an Azure application with the following credentials:

- ClientID: tikitest
- Client secret: qtlQwEJZ71Xp25WcQ6sLfnYvSaCoA

    I have enabled the Machine Translation option and selected Bing and entered the correct credentials.

    When I try to use the Machine Translation option on a wiki page, the page reloads, but the original language remains. Tiki displays the following text alert box:

    WARNING
    This text was automatically translated by Google Translate from the following page:
    myWikiPageName

    Notice that Tiki says "Google Translate" even though I selected Bing as my machine translation.

    I flagged this as Importance = 10 because Bing offers a free machine translation option, while Google does not.

Importance

10 high

Priority
    50

Show instance seems to be broken. 😕
I get: Tiki Installer missing third party software files

Jean-Marc Libs 10 Aug 16 02:06 GMT-0000

That happens. You are too impatient, as is explained in the (too long) explanatory text: «Note that if you see PHP errors or a Tiki claiming to be missing third party software, the instance creation is probably not finished. Please wait 1 minute and reload.»

Rick Sapir / Tiki for Smarties 10 Aug 16 12:36 GMT-0000

Thanks! Show instance now working:

http://ricks-6399-6075.show.tikiwiki.org/tiki-index.php?page=myWikiPage

- admin
- 12345

The error message now shows:
Argument ExceptionMethod: Translate()Parameter: Message: No bearer information found in the tokenmessage id=3444.V2_Rest.Translate.19222B07

(But it still says Google even though I've selected Bing.

Thanks!
