### Description

See this code:

```
{TRACKERLIST(trackerId="6" fields="20:27:31:33:34:43:46:36" showstatus="y" status="op"
sortable="y" server="y" editable="43"
tsfilters="type:text|type:text|type:text|type:text|type:date;format:yy-mm-
dd;from:2016-06-01;to:2016-12-31|type:date;format:yy-mm-
dd;from:2016-06-01;to:2016-12-31|type:date;format:yy-mm-
dd;from:2016-06-01;to:2016-12-31|type:dropdown" showlinks="y")}{TRACKERLIST}
```

The tsfilters code type:date;format:yy-mm-dd;from:2016-06-01;to:2016-12-31 is now in trunk applied (so that items without date or not matching the date range are filtered out), while in Tiki 15 they were just used to preselect the date of the rate range filter, but those date ranges were not applied (items without date or not matching the date range where also shown in the results of the table).

---

If this is confirmed as a regression and fixed in trunk, I reckon that we need to revert this commit I

made before I knew that this looked like a regression:

[ENH]Warn the user that this apparently is the new default behavior for 16.x. Probably feature fix since it makes more sense to be like this, but it was not the default behavior until short ago, afai. Subversion: Committed revision 59430.

Fixed reference to affected branch. It was trunk, and at the time of the bug reporting, that meant 16.x. This issue is not seen any more in 16.x, however, it is in trunk still. Therefore, I tagged it against 17.x and 17.x regression.

Don't really understand this one - are you planning to revert your commit in order to fix this?
