Description
	On Tiki 15.x REV 59543 setting Articles out of the box;

	There is a "un-natural" limitation for Article image size by default.
	When I try to save an article with a picture heavier than 1mb (approx.) the article is saved without
	any error message and no picture is saved.

	If I reduce size, the image is saved in the top image gallery without any acknowledgement, selection
	or choice. (openeing a discussion in the dev list)

	It may be a system setting, but anyway, the user should be warned and the article should not be
	saved with improper picture ommited.

	–

	Out of the box I went to admin, activate the Articles feature.
	I create a new article enter a title, heading, body and an image article.
	http://bsfez-11581-6098.show.tikiwiki.org/tiki-read_article.php?articleId=1

	The image is within several bootstrap classes (class="col-xs-6 col-sm-5 col-md-3") and it flows under
	the heading text making this feature broken.

Comments

Gary Cunningham-Lee 31 Aug 16 08:32 GMT-0000

Once the image is selected and being displayed, it should have the class "img-responsive". Or giving the image an inline style "max-width: 100%" also prevents the image from overflowing outside its container.

(I don't know what's happening regarding the problems you described for image upload for articles.)

Bernard Sfez / Tiki Specialist 01 Sep 16 06:30 GMT-0000

Hi Gary,

At templates/article.tpl line 70 I added the "img-responsive" class.
69: {* display own article image *}
70: <img class="img-responsive"

It solves the overflow, however the article image size is not working anymore. (Edit article -> tab Image)

I think it is prohibided by line 56 : col-xs-6 col-sm-5 col-md-3

Gary Cunningham-Lee 01 Sep 16 11:59 GMT-0000

That's right - the img-responsive image conforms to the size of its container. There's a problem

giving images specific pixel widths, if the page is intended to be responsive. I suppose the article code needs to be revised to allow different image sizes as before. I'll take a look.

Gary Cunningham-Lee 12 Sep 16 16:06 GMT-0000

Damn, I just wrote and posted a comment that didn't get saved. Anyway, how about this:

If the author selects "wrap text around image", then the grid doesn't get used and the image is simply floated left and the text wraps around it. The image dimensions input by the author are used (if only one dimension is input then the other is given "auto" to keep the image proportional).

If the author doesn't select "wrap text around image", then the (pre-defined) grid is used and no input dimensions are used. The image has a img-responsive class and conforms to the grid div that contains it.

There would be some help hints on the edit page to guide the author about this.

I'll try testing something like this locally.

Bernard Sfez / Tiki Specialist 13 Sep 16 05:38 GMT-0000

Sound great !
Thanks for testing, I set a topic about this for the next roundtable if we still need more brains.

Gary Cunningham-Lee 14 Sep 16 05:39 GMT-0000

I believe this is fixed in trunk r59679. I tested it, changing all the edit-article image options, and it seems to handle the different possibilities ok. Basically I removed the grid layout and replaced it with Bootstrap media layout classes and inline CSS. If you have a trunk instance, you can test it. If there are no problems, I'll backport to Tiki 15. (Update: my first commit r59678 broke the topic image position, but this is fixed in r59679.)
