When I put the following LIST plugin showing the contents of a file gallery:

```
{LIST()} {filter field="gallery id" content="4"} {LIST}
```

I get a:

System error. The following error message was returned: Unknown column 'created' in 'order clause' The query was: SELECT \* FROM `index\_57c5a14334249` WHERE 1=1 AND (`searchable` = 'y' AND `gallery\_id` = '4') ORDER BY `created` desc The built query was likely: SELECT \* FROM `index\_57c5a14334249` WHERE 1=1 AND (`searchable` = 'y' AND `gallery\_id` = '4') ORDER BY `created` desc

This does not happen in the blog post preview or in a wiki page.

Curious indeed, but it seems to be because `tiki-view_blog_post.php` uses a default `sort_mode` of `"created_desc"` for no apparent reason and this confuses the list plugin. There is a workaround though, you can specify the `sort_arg` for the pagination like this:

Page 1 of 2

```
{LIST()}{ pagination sort_arg="list_sort_mode"} {filter field="gallery_id" content="4"}  
{LIST}
```

and it then works ok (but who knew!?)

It seems the code in `tiki-view_blog_post.php` makes sense.

The issue is with plugin LIST not ignoring `$_REQUEST['sort_mode']`
