Description

t.o: page alias feature not working because some duplication exists (not prevented at edition time and feedback gone too quickly)

Reproduced here:
https://tiki.org/Community+Servers

alias added at the bottom was:

(alias(Servers))

When saving the page, some remarksbox is shown for less than a second reporting some duplication of the alias link, and the page is saved removing that remarksbox with the info. And I can't find where else in the t.o site that alias name is written.

Searching for "alias(Server" didn't bring the other page but dozens of pages.

In Tiki12, if I recall properly, if an alias link existed, you were not allowed to save your page, and you were told where that alias name was used already, so that you could at least go there and the duplication by hand before saving your page.
