Description

When Fivealive is used with mod-logo in the Top module zone, with Site layout Classic Tiki (3 containers) and with a Site title defined, that title will be displayed too much to the left, unless the site logo is large enough to make it start in the colored zone.

This makes the header ugly, in particular because there is an important loss of contrast between the text and the background. Thanks to the shadow effect, some contrast remains, but readability is affected.

This bug appeared in Tiki 13.

I do not know if this persists in trunk. I do not see the colored background there.

This persists in 15.x as of r59957.

Note that the title is also too high.

Workaround

Use a different theme or site layout.
