Description

In Look and Feel admin, switching the font set to Glyphicon seems to have no effect. The font set being used is Font Awesome instead. Switching to the legacy icon set (.png images) does work ok. (Checked on my localhost branch 15 and trunk so far.)

I created a show instance (<http://chibaguy-342-6164.show.tikiwiki.org>) that confirms the bug: after switching to Glyphicons, Font Awesome is used instead (icons have a class like "icon icon-admin_search fa fa-search fa-fw ").

Didn't think it was related, but just to be sure I emptied the caches and rebuilt the search index, but no change.

Thanks for the feedback. I realize I was only checking the admin anchors (feature icons) on the admin pages, which aren't changing to Glyphicons, and assuming none of the icons are switching (although icons other than the admin anchors are switching). I'll rename the bug.

Solution

This bug report is being closed because there is no bug actually. As gezza said in the comments, Glyphicons just aren't defined for the admin anchor icons, so the solution is to specify Glyphicon icons for those, assuming there are appropriate ones.

Comments

gezza 09 Nov 16 15:39 GMT-0000

it works on the show instance, i set it to legacy and the png icons appear, I left the show instance like that

also glyphicons works

can you check again?

drsassafras 10 Nov 16 04:20 GMT-0000

Im not entirely sure what the expected behavior is. Im guessing that it should look differently and use a different font when glyphicons is selected.

I have confirmed with firebug that in both the show instance, and my local trunk, the font being used is FontAwesome when ether option is selected.

gezza 10 Nov 16 08:02 GMT-0000

which icon is it?

if an icon is not defined in the glyphicon set, than as fallback the default iconset (fontawesome) will be used

switching iconset on the show instance to glyphicon works fine, check the question mark classes just below the iconset preference setting ("icon icon-help glyphicon glyphicon-question-sign")

Gary Cunningham-Lee 10 Nov 16 04:45 GMT-0000

Thanks for checking the show instance. I was only looking at the admin (feature) icons on the admin pages, which don't seem to change to Glyphicons. Other icons on the pages do change. So the problem is limited to the admin anchors, I believe.

gezza 10 Nov 16 08:06 GMT-0000

admin icons are not defined in the glyphicon set, so the default is used as the fallback (you can compare default vs glyphicon iconset definitions in the /themes/base_files/iconsets folder)

so you need to define the different admin icons in the glyphicon set

Gary Cunningham-Lee 10 Nov 16 09:36 GMT-0000

I see. Thanks for the info. So this isn't a bug, just an icon set not being maintained. (I agree with the idea that, since we have Font Awesome, there isn't much point in supporting Glyphicons as they don't offer anything extra, and actually not as much, but maybe as long as they're in the package, they should be supported as fully as possible. Anyway, in Bootstrap 4, Glyphicons are removed, so this is only a temporary situation.)
