Dynamic Items List produces blank items if Listed Field (aka listFieldIdThere) is field type Drop down with other

**Description**

tracker id 11 Apartment Configuration Details has:
97 AptDetail ConfigID text field
98 AptDetail Item drop down with other (Living + Dining Room, Master Bedroom, Master Bathroom, Bedroom #2, Bedroom #2 Bathroom, Bedroom #3, Bedroom #3 Bathroom, Study Room, Common Bathroom, Kitchen, Pantry, Store Room, Verandah #1, Verandah #2, Open Parking #1, Open Parking #2, Covered Parking #1, Covered Parking #2, Secured Garage #1, Secured Garage #2, other=Other)

tracker id 1 Change Management has:
187 CRM ConfigId text field
53 CRM Work Area dynamic items list (tracker id=Apartment Configuration Details, Field ID (Other tracker)=AptDetail ConfigID, Field ID (This tracker)=CRM ConfigId, Listed Field=AptDetail Item)
If AptDetail Item is a tracker drop down field then Dynamic Items List (ie trackerid 1, field id 53) will produce blank items in its drop down list.

Workaround
No workaround in Tiki. However a js kludge like the following is doable:

```
(function () {

    var choices = %22Foo%22,
                   %22Bar%22,
                   %22Baz%22;

    $('#myTextBox').closest('.controls').append('<div class="help-block">Choose existing or type new one and press Enter</div>').end()
      .select2({
        width: 'resolve',
        placeholder: "",
        initSelection: function (element, callback) {
            var value = $(element).val();
            if (value)
                callback({ id: value, text: value });
        },
        query: function (query) {
            // match
            var items = $.grep(choices, function (item) {
                if (!query.term)
                    return true;
                return query.matcher(query.term, item);
            });
            items = items.sort();
            if (query.term)
                items.push(query.term);
            // map to {id: , text: }
            var data = {};
            data.results = $.map(items, function (item) {
                return { id: item, text: item };
            })
            query.callback(data);
        } });
