Description
    I did several upgrade lately from Tiki 15.x, Tiki16.x, Trunk, 15.4 package, 16.2 package and today's daily from 16.3.

    Somewhere near 15.4 release something was broken and the browsertitle pref is empty instead of showing previous data at tiki-install.php / Configure General Settings.

Solution
    fixed: r61137
