Description

I'm trying to list wiki pages using the new distance filter. This is the code I am using in the wiki editor:

```
{LIST()} {filter distance="50000m" lat="153.601290" lon="-28.645920"} {LIST}
```

I have posts located within the distance of the specified coordinates but the command throws the following error when I visit the wiki page:

```
Error Expression not supported: Search_Expr_Distance
```

Are you using Elastic Search as the engine? Sorry but it only works on elastic and probably the error message needs improving (a lot)

tripspec 07 Feb 17 03:45 GMT-0000

I'm not using ElasticSearch. I will install elastic and go from there. Thanks for the help!
