Description

In Tiki 15.4 the theme Fivealive does not display by default the Login, Preferences, Quick Administration icons at the Top Module.

Describe precisely what you did (how to reproduce).

I installed fresh instance of TikiWiki 15.4 via Softaculous on shared hosting. I then activated the Fivealive theme.

Describe exactly the faulty consequences.

Immediately the Top Module icons were missing, actually hiding because the text color is set at white.

Explain what you expected instead of the faulty consequences.

I expected to see the icons at the Top module. The text color can be change to accommodate this fault, but for a new user, this will be very confusing.

Solution

Theme stylesheet changes, etc. have made this problem go away as the problem isn't apparent in recent Tiki versions.

What theme option is being used at the site where the problem was seen? (Fivealive is meant to be used with a theme option, though it actually should display OK without one, and this isn't documented really.) Also, what layout template is being used - the site header background images work in the "Classic Tiki" and "Wider side columns" layouts, only, I believe. (There should be some text information for each theme choice in the selector, maybe.)

John Morris 13 Feb 17 05:03 GMT-0000

Thanks for the feedback Gary. I did go through the options you listed above and I can now bring up the icons when I change the layout from Basic Bootstrap to anything else. Once I change the layout, the icons are seen. The last layout "Fixed Top Navbar 2 (Uses site icon + "topbar" module zone) however does not support the display of "Recent Preferences" and "Quick Admin" however you can see the "Login" text at the upper right of the header area.

So I guess it's more of a lack of documentation? I am coming from the perspective of a brand new user who excitedly loads up an instance via Softaculous on their shared hosting, they choose Fivealive, and they are met with missing login icon and others. Could be pretty frustrating for that guy. Any suggestions are greatly appreciated. I understand this would be lowest priority. Perhaps it's not even an issue at this point.

Gary Cunningham-Lee 13 Feb 17 05:16 GMT-0000

All the themes should at least work (everything that needs to be seen/used can be) with every layout template. So the FiveAlive site header can work best in some layouts, but the icons, links, etc. should be visible in all of them. So this does need to be fixed.

John Morris 13 Feb 17 05:51 GMT-0000

Thanks sir.

Gary Cunningham-Lee 23 Sep 18 16:21 GMT-0000

I don't have a Tiki 15 to test with at the moment, since another PHP version is needed for Tiki 18 and newer. But I'll try to backport the fix that I believe was made for recent versions of Tiki.
