Description
I have setup a forum for a freshly upgraded Tiki pre-17 trunk :
(Last Update from SVN (17.0svn): Wednesday, 22 March 2017, 19:03:57 CET- REV 61822)
Then I added an eMail to send to from the forum to the email address, what works.

After that I added another email - a pop account - and saved and then the forum is not accessible in view mode anymore: my.example.com/forum5 shows a WSOD white screen.
Deleting the mail account, the forum works fine again.

As we are using this feature on tiki.org heavily and other users might also, I consider this a a 'Release Blocker'.

Solution
r62430 i hope 😃
